

WaterBoy Instructions

1. Rinse tank thoroughly prior to first use. With the tank standing on end, fill it with about 3 quarts of water to fill line just below the cup's opening. Once full, replace cup snug enough to form a tight deal.

A very tight seal is necessary for proper function.

2. Next, lay the WaterBoy flat on floor, swiftly. You'll notice that the water level in the cup will remain at about 1/2" deep at all times, As your pet drinks, more water will flow into the bottom of the cup from the reservoir until finished. Or, when you need water a a faster rate, simply step lightly on tank body to raise water level.

(This patented design prevents spilling and splashing at home, or in cars, trucks, RV's and boats. It also reduces harmful contaminants).

3. When picking up the WaterBoy, stand it up slowly on the end and let the water re-enter the reservoir. It won't spill even if flipped upside-down. Try it!

4. For those warm days, use the WaterBoy with ice or chill in the fridge or freezer for hours of fresh, cold water.

5. When needed, clean the WaterBoy with mild dish soap and a sponge, then rinse out.
